

The paper discusses the relationship between Business Process Management (BPM) and Information Systems (IS). It starts by defining BPM and IS, and then explores how they interact. The authors argue that BPM and IS are complementary and can be used together to improve organizational performance. They discuss the challenges of integrating BPM and IS, and provide some suggestions for how to overcome these challenges. The paper concludes by stating that BPM and IS are essential for organizations that want to stay competitive in a global market.
