***Lessonbee Adaptive Online Health Education, Grades 7-8***

Lessonbee Adaptive Online Health Education	9780578837062		scene 1 slide 43 Response to T/F question	<a href="#">View Link</a>	<p>Q: T/F: Teenagers are typically more emotional, so their decisions are made too quickly without consideration of the consequences. The publishers reason for this question being False states: "While the brain is certainly going through a lot of change during adolescence, this doesn't mean that a teenager is unable to make rational decisions. Reasoning and critical thinking skills don't vanish in times of change, even when emotions are running high." This may be technically accurate, however, this question is really neither true or false. Or more accurately, it is BOTH true AND false. A teenager is typically more emotional, and they are less likely to make rational decisions because the prefrontal cortex is not fully developed. Reasoning and critical thinking skills don't "vanish" - that is correct, but they are less accessible when emotions are high AND those skills are not fully accessible to the teen-</p>
